Claims Allowed

Claims 1-10 are allowable over the prior art of record. The claims are allowable because the prior art does not anticipate nor render obvious the invention of the method and apparatus for automatically performing an upshift in a vehicular transmission by determining whether or not a range upshift has been initiated, a position of a shift lever is in a low range neutral position, and a vehicle speed is greater than a predetermined value, and performing the upshift if it is determined that the range upshift has not been initiated, that the shift lever is in the low range neutral position, and that the vehicle's speed is greater than a predetermined value.

Prior Art Discussed

The examiner has considered the references cited by applicant in his Information Disclosure Statement. None of the references show all of the features of the invention. The references cited by the examiner are deemed pertinent to applicant's disclosure. Cox '040 shows an automated control for a range shift from a highest position to a low range, but does not show an automated upshift under the claimed conditions. Menig '288 shows an automated missed shift recovery controller but does not show an automated upshift under the claimed conditions. Cochran '126 shows an automated shift control for an auxiliary section of a compound transmission, but does not show an automated upshift under the claimed conditions.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dirk Wright whose telephone number is 703-308-2160. The examiner can normally be reached on Monday through Friday, 8AM-4:30PM.
